Sprint

Accomodate/Communicate changes in the features

The domino Effect of changes in a Sprint

1)Scope Expansion:

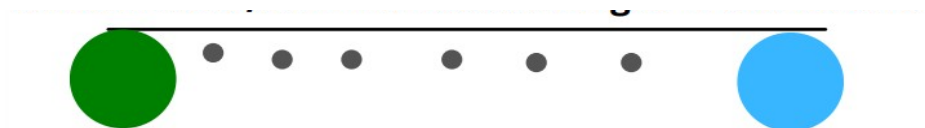

Stakeholders often identify additional features or changes they want to see in the product. These new requests, if accepted, lead to an expansion of the sprint's scope, potentially adding more work than the team initially committed to.

2)Reduced Focus:

As the team adapts to accommodate the new changes, it can lose focus on the original sprint goal. This reduction in focus can lead to inefficiencies and potentially compromise the quality of the work on the sprint backlog items.

3)Team Morale:

Frequent changes within a sprint can impact team morale. Team members might feel overwhelmed or frustrated if they perceive that their initial commitments are not being honored.

Name the coloured dots which are meetings or ceremonies in the sprint

The coloured dots which are meetings or ceremonies in the sprint are likely:

Green Dot : Sprint Planning

Blue Dot : Sprint Review

In a typical Agile sprint, these are two of the key ceremonies along with the Daily Stand-Up and Sprint Retrospective.

Member1

Member 2

Member 3

Member 4

Name the members who are the part of Agile team

The members who are part of the Agile team are:

1. Product Owner
2. Scrum Master
3. Development Team

Smaller projects typically consist of 4 team members (product owner, scrum master, and 2 developers)

BA Roles and any 3 tools he uses for the support of roles

BA Role

1. Eliciting requirements
2. Analyzing requirements
3. Documenting requirements
4. Communicating requirements
5. Managing requirements

Tools:

1. JIRA
for issue and project tracking
2. Confluence
for documentation and collaboration
3. Microsoft Visio
for creating diagrams and flowcharts
